

Phishing Email Detection & Awareness Report

1. Introduction

Phishing is one of the most common cyber attacks where attackers trick users into revealing sensitive information such as passwords, OTPs, or financial details. These attacks are usually carried out through fake emails that appear to come from trusted sources.

2. Objective

- Analyze phishing email samples
- Identify phishing indicators
- Classify emails (Safe/ Suspicious/ Phishing)
- Explain attacks in simple language
- Provide prevention guidelines

3. Tools Used

- Google Admin Toolbox (Email Header Analyzer): Used to analyze email headers and identify sender authenticity.
- MXToolbox: Used to check domain reputation and email server details
- Web Browser (for link verification): Used to inspect and verify suspicious URLs

4. Email Analysis

Email 1: Phishing Email

Subject: Urgent Your Account Will Be Locked

Email Body:

Dear User,

We detected suspicious activity.

Email 1	High Risk	Fake link + urgency
Email 2	Medium Risk	Requests sensitive information
Email 3	Low Risk	Legitimate email

6. Phishing Indicators

- Fake sender email
- Urgent or threatening language
- Suspicious links
- Generic greetings
- Requests for sensitive information

7. Prevention Guidelines

Do's:

- **Verify sender email**
- **Check links before clicking**
- **Use multi-factor authentication**
- **Report suspicious emails**

Don'ts:

- **Don't click unknown links**
- **Don't share passwords or OTPs**
- **Don't trust urgent messages blindly**

8. Conclusion

Phishing attacks are one of the most common cyber threats that exploit human behavior. By identifying phishing indicators and following security best practices, users can effectively prevent such attacks
